

Oxy Vinyls Canada Co. (OxyVinyls), a subsidiary of Occidental Chemical Corporation, is a leading North American manufacturer of polyvinyl chloride (PVC) resins— key building blocks for a variety of indispensable products, including medical applications, piping systems and water distribution systems. OxyVinyls success is built on technical expertise, business acumen, strong partnerships and proven ability to deliver lasting results. OxyVinyls is committed to respecting the environment, operating safely and upholding high standards of social responsibility throughout the company's worldwide operations.

OxyVinyls is a proud member of the Vinyl Institute of Canada (VIC) and supports the VIC mission of promoting the benefits of vinyl products. OxyVinyls shares the VIC objective to champion continuous performance improvement throughout the vinyl industry. OxyVinyls values the VIC efforts to provide factual and accessible information regarding vinyl products to all sectors of the public.

As the Plant Manager of OxyVinyls' Niagara PVC plant, I find it rewarding to be a member of the VIC working collaboratively with industry leaders and scientists on initiatives ranging from recycling vinyl to promoting the use of vinyl in such key areas as healthcare products and pipelines to convey potable water. It is a testament to Aíne Curran (VIC President), Veso Sobot (VIC Chairman) and the rest of the VIC leadership team to unite the vinyl industry and ensure the sustainability of vinyl products for the benefit of future generations.

James J. Segada
